

PHP ASSIGNMENT – 2

USER-DEFINED FUNCTIONS

#1: Simple Function

Create functions to perform arithmetic operations. (+,/,*,) Accept value from the user through GET and POST.

#2: Function with Arguments and Return Values

Create a function to accept two arguments, perform a calculation using them, then return a sentence with the result to the browser. The function will calculate the area of a rectangle, with the two arguments being width and height. (Reminder: $\text{area} = \text{width} * \text{height}$.) The sentence to be returned is "A rectangle of length \$l and width \$w has an area of \$area.", where \$l and \$w are the arguments and \$area is the result.

#3: Function with Arguments

Rewrite the exercise from #2 to perform function with arguments, no return value.

#4: Function with Arguments

Write a PHP program to check if a person is eligible to vote or not.

Condition

- Minimum age required for vote is 18.
- You can use [Decision Making Statements](#).

ARRAY

#1: Indexed Array

If you have an array \$a = array(0, 1, 2, 3, 4);, how do you extract the value 3 from the array?

#2: Associative Array

If you have an array \$a = array("zero"=>0,"one"=>1,"two"=>2,"three"=>3,"four"=>4);, how do you extract the value 3 from the array?

#3: Associative Array

Use the list of cities in Arrays. Here's the list of Cities along with Country.

Tokyo, Japan; Mexico City, Mexico; New York City, USA; Mumbai, India; Seoul, Korea; Shanghai, China; Lagos, Nigeria; Buenos Aires, Argentina; Cairo, Egypt; London, England.

Create an Associative array, using the countries as keys, the cities as values. Print the statement \$city is in \$country., where \$city is the value, and \$country is its key.

#4: Indexed/Numeric Array

Demonstrate the use of Indexed/Numeric Array with FOREACH loop execution.

Create an array of following list of Colleges.

('Atmiya', 'Christ', 'DDIT', 'ROLLWALA', 'Marwadi', 'RK')

Print the names of all colleges using foreach loop.

#5: Normal Array

\$color = array('white', 'green', 'red') Go to the editor

Write a PHP script which will display the colors in the following way :

Output :

white, green, red,

- green
- red
- white

#6: MultiDimensional Array

Demonstrate the use of MultiDimensional Array. Use the following code and print it the same.

```
echo "Marks for Bipin in Maths : ";  
echo $marks['Bipin']['Maths']."<br>";  
echo "Marks for Bhavik in Physics : ";  
echo $marks['Ravi']['Physics']."<br>";  
echo "Marks for Amit in Chemistry : ";  
echo $marks['amit']['Chemistry']."<br>";  
  
echo "<pre>";  
  
print_r($marks);
```

Output must be these:

Marks for Bipin in Maths : 45
Marks for Bhavik in Physics : 40
Marks for Amit in Chemistry : 48

```
Array
(
    [Bipin] => Array
        (
            [Maths] => 45
            [Physics] => 40
            [Chemistry] => 42
        )

    [Ravi] => Array
        (
            [Maths] => 40
            [Physics] => 40
            [Chemistry] => 40
        )

    [amit] => Array
        (
            [Maths] => 50
            [Physics] => 45
            [Chemistry] => 48
        )
)
```
